

CUSTOM BATHROOM VANITIES • 2026

The Vanity Book

Every size, layout, door style, finish, hardware, top and sink option we build in our Fort McMurray shop, and a spec sheet to put your vanity on paper.

CONCEPT RENDER

Built to fit your room, not a catalogue box.

Aurora Cabinets Ltd. is an Indigenous-owned custom cabinet and millwork shop in Fort McMurray, Alberta. Every vanity in this book is built to order: any width, any layout, in the finish you choose. Use this book to narrow your choices, then we turn them into shop drawings.

How to use this book

- 1

Size p. 3
Pick a width, depth and height for the room.
- 2

Mounting p. 4
Floating, toe kick, or furniture-style legs or open base.
- 3

Layout p. 5
Doors, drawers, U-drawers, double sinks and towers.
- 4

Door style p. 8
Slab, Shaker, Slim Shaker, recessed panel, fluted or handleless.
- 5

Finish p. 11
Melamine (TFL), painted colours, or wood veneer and stain.
- 6

Hardware + organizers p. 10, 14
Pulls, knobs and edge pulls, plus soft-close drawers and inserts.
- 7

Top + sink p. 15
Quartz, solid surface or laminate; undermount, vessel or integrated sink.
- 8

Spec sheet p. 22
Tick your choices on pages 22–23 and bring them to your design meeting.

Good to know. Sizes shown are our common starting points. We build to the inch (and fraction) to suit your space, plumbing and walls. Colours in this book are printed approximations; please choose from physical samples. All renders are concepts to show what's possible, not photos of finished Aurora projects.

Countertops + sinks	15	Commercial barrier-free vanities	17
From sketch to install	21	Client spec sheet	22

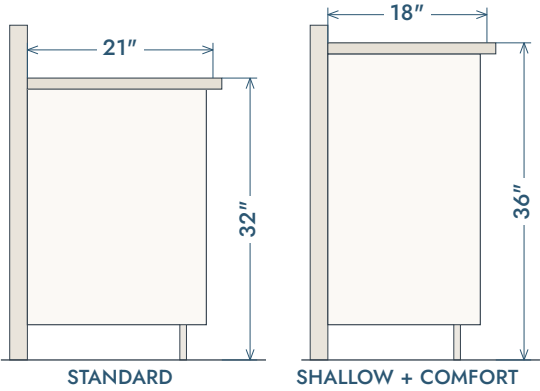

Widths, depths and heights

Common widths

Single-sink vanities usually run **24" to 48"**. From **60"** up there is room for two sinks. Any width in between is fine; these are just the common ones. Bars are drawn to scale; white marks show typical sink positions.

Depth + height

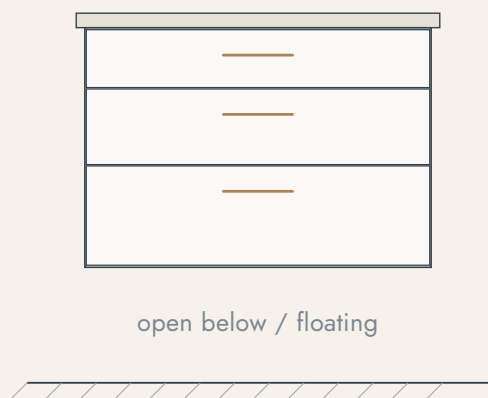

Depth	21" standard	about 18" shallow, for narrow rooms and powder rooms
Height	31-32" standard	34-36" comfort height, closer to kitchen height

Heights are to the top of the counter. Vessel sinks add their bowl height on top, so we usually build those lower. Depth is measured from the wall to the front of the doors; the top overhangs a little more.

Measuring tip: note the wall-to-wall width, any door or window trim, the drain and supply locations, and where the light switch and outlets sit. We confirm everything with a site measure before we build.

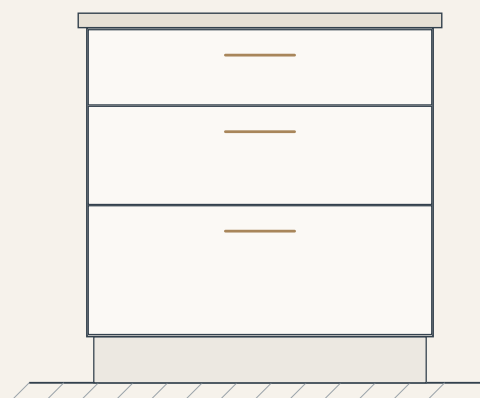

How it meets the floor

The base sets the style as much as the doors. Every mounting style works with any layout in this book.

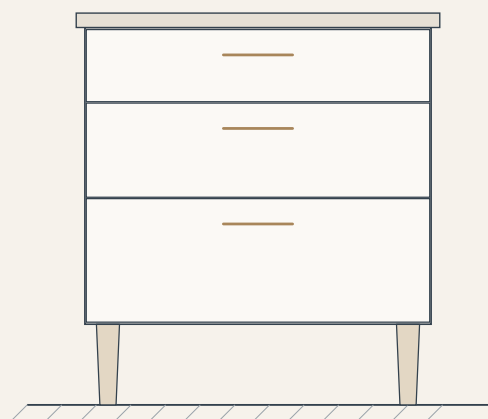

Floating / wall-hung

Mounted to blocking in the wall, open floor below. Easy to clean, light and modern. Pairs well with under-vanity LED.

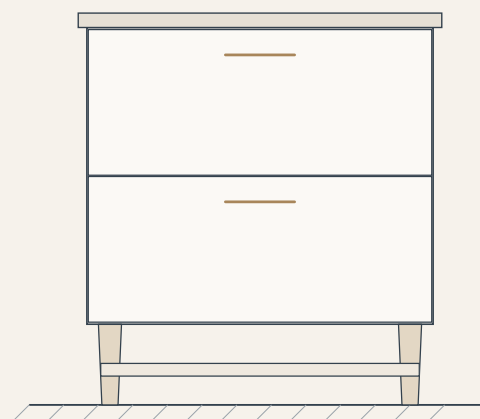

Floor-standing with toe kick

Sits on the floor on a recessed toe kick. The most storage, and the simplest install.

Furniture-style with legs

Raised on legs like a piece of furniture. Tapered, square or metal legs.

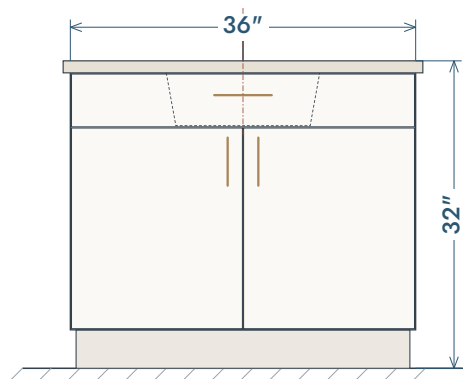

Furniture-style, open base

Legs with an open shelf for towels and baskets underneath.

Floating vanities need solid blocking in the wall before drywall, or a bracket system such as the Richelieu 21" vanity bracket (black, item 6240210090). Tell us early so your contractor can plan the blocking and plumbing height.

Layouts: single sink

Drawings show a typical example of each layout. Every one can be resized, mirrored, or combined.

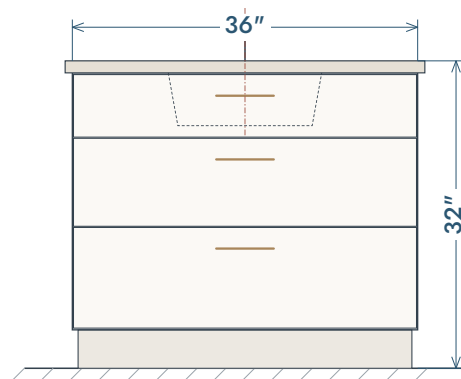

All doors

Two doors under a false front at the sink. The simplest and most budget-friendly layout, with room for tall bottles and a roll-out.

COMMON SIZES

24" · 30" · 36" · 42" · 48"

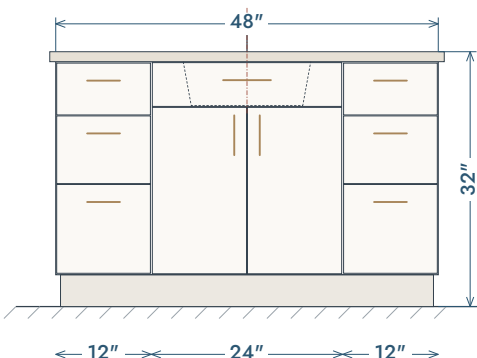

All drawers

A full stack of drawers. The top drawer is U-shaped to clear the trap, so everything is easy to see and reach.

COMMON SIZES

24" · 30" · 36" · 42" · 48"

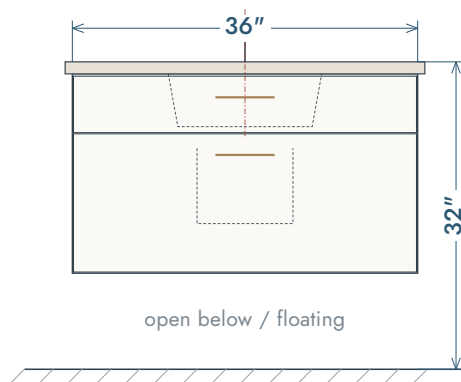

Sink base with side drawer banks

Doors at the sink, flanked by drawer banks on one or both sides.

COMMON SIZES

42" · 48" · 60" (single)

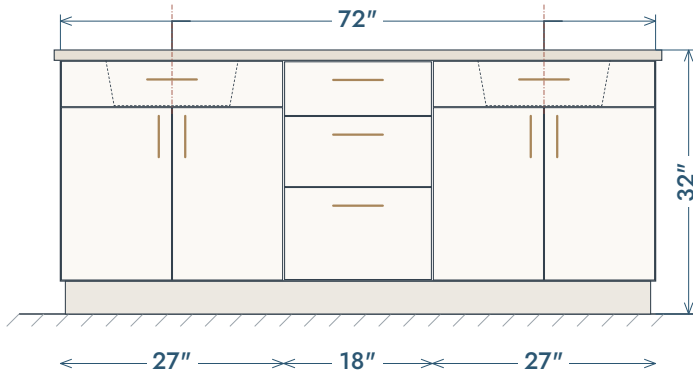

U-shaped drawers around the plumbing

One deep drawer wraps around the drain (dashed cut-out), with a shallow drawer on top. Great on floating vanities.

COMMON SIZES

24" · 30" · 36" · 48"

Layouts: double sink + towers

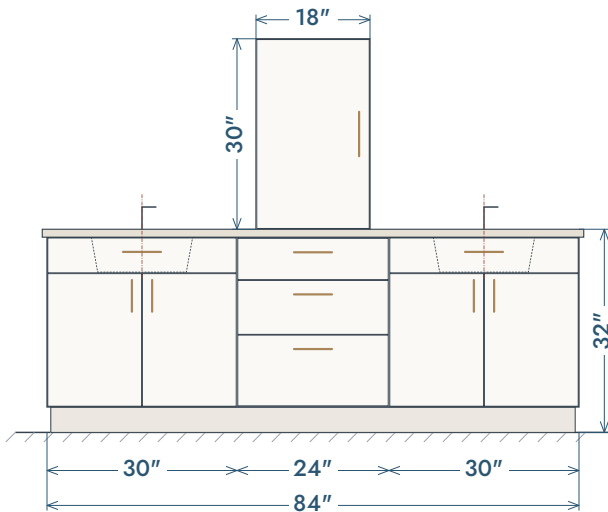

Double sinks with a centre drawer bank

Two sink bases with a drawer bank between them: shared storage in the middle, one sink each.

COMMON SIZES

60" · 72" · 84" · 96"

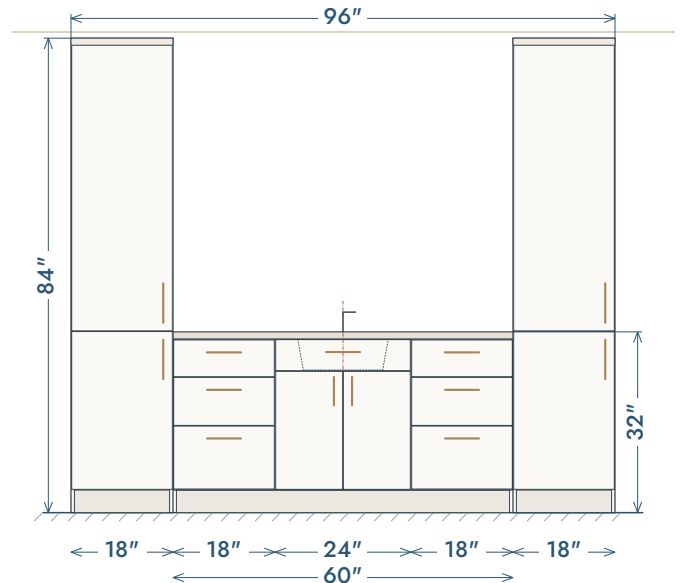

Countertop centre tower

A linen or storage tower sits on the counter between the two sinks. Height to suit the mirrors.

COMMON SIZES

72" · 84" · 96"

Full-height side linen towers

Floor-to-ceiling linen towers on one or both ends, with the vanity between. Tower widths usually 15–24".

COMMON SIZES

Vanity 48–72" + towers 15–24" each

Tower options: adjustable shelves, a hamper pull-out, glass or solid doors, or an outlet inside for chargers and hair tools (electrician required). Towers can match the vanity or contrast with it.

Dimension lines are in inches. Red dash-dot lines mark sink centrelines. Tower heights are examples; we size them to your ceiling and mirrors.

CONCEPT RENDER

Floating rift-oak double

Rift-cut white oak slab drawers · Champagne Bronze bar pulls · white quartz with twin undermount sinks · under-vanity LED

Door + drawer-front styles

Drawer fronts follow the door style; a slab drawer front with Shaker doors is a popular mix.

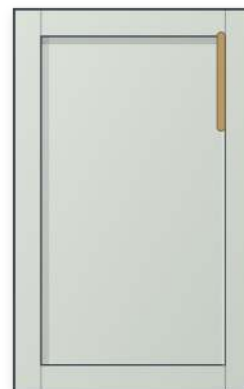

Slab

Flat, clean and modern. Any TFL, painted MDF or wood veneer. Grain can run vertical or horizontal.

Shaker

Five-piece door with a square inside edge and flat recessed panel. Aurora's classic.

Slim Shaker

A skinny 1" or 1-1/8" frame, about 7/8" thick, from Klaas ("narrow shaker"). The current favourite.

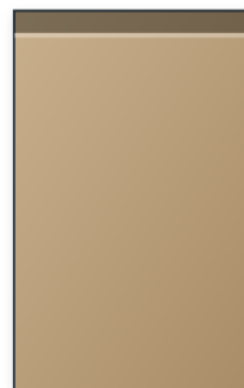

Recessed / flat panel

Five-piece frame with a bevelled inside edge around a flat panel, for a softer transitional look.

Fluted / reeded

Vertical reeds on drawer fronts or doors, in wood or painted MDF. Shown in walnut.

Handleless: J-pull

A routed J-pull along the top edge, so no hardware. Also available as a finger-pull notch.

Slim Shaker spec (Klaas): 1" minimum frame (1-3/4" at the back) or 1-1/8" recommended with Blum CLIP top hinges (1-7/8" at the back); about 7/8" (22 mm) thick, with the panel about 3/16" (5 mm) below the frame face. Klaas five-piece doors come in MDF (paint grade), maple, white oak, rift-cut white oak, black walnut and more.

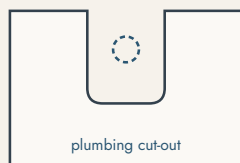

CONCEPT RENDER

Fluted walnut powder room

Floating single vanity · reeded walnut fronts, handleless · white vessel sink on a slim quartz top · brass wall faucet

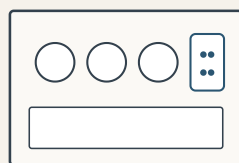

Drawer organizers + inserts

What goes inside matters as much as the outside. Mix and match these in any layout.

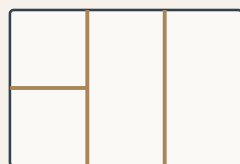

U-drawer plumbing cut-out

The drawer wraps around the trap, so you keep a full-width drawer under the sink. Klaas makes pipe (sink) drawers for this.

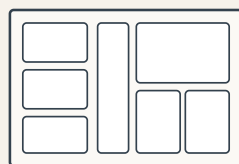

Hair-tool + outlet drawer

Holders for a dryer, straightener and curling iron, with in-drawer power: Klaas charging drawer with a Docking Drawer® unit (electrician required).

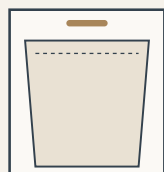

Drawer dividers

Klaas removable dividers or trim-to-size straight dividers, so you can split a drawer to suit.

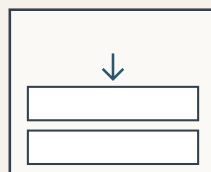

Makeup trays

Klaas trim-to-size makeup divider inserts keep small items sorted in a shallow top drawer.

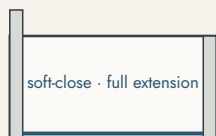

Pull-out hamper

A Klaas laundry (hamper) pull-out behind a door or false drawer front. Laundry goes in at the vanity.

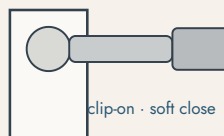

Roll-outs

Klaas roll-out drawers behind doors bring tall bottles and cleaning supplies forward; Klaas also makes a grooming pull-out.

Richelieu AXIAL soft-close drawers

Our standard drawer system: full extension, soft close, in white, silver or dark grey sides. Blum Tandem or Legrabox, or Klaas dovetail boxes, on request.

Blum CLIP top hinges

Doors hang on Blum CLIP top BLUMOTION 110° soft-close hinges (Richelieu 71B359180), with 170° hinges where doors need to open wider.

Also available: dovetail drawer boxes from Klaas (Select Maple, Baltic Birch, ECO, or rift white oak and walnut) on Richelieu 828EVO undermount slides, and K Push push-to-open latches (Richelieu 11838030) for handleless fronts.

Melamine (TFL) + painted colours

Melamine / TFL

Thermally fused laminate is tough, easy to clean and the best value. Doors are edgebanded slabs made in our shop.

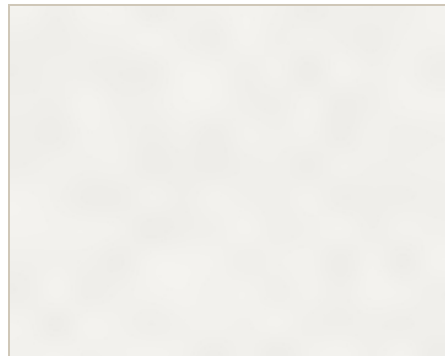

Cannes K15

Riviera Oak collection (Tafisa) · Aurora favourite

All swatches on this page are approximate colours. Please see a physical sample before you choose.

Wood species, veneers + stains

Solid-wood five-piece doors come from Klaas; slab doors and gables are veneer plywood finished in our shop. Wood grain varies from piece to piece, which is part of the charm.

Species

White oak
Flat-cut, cathedral grain

Rift white oak
Tight, straight grain

Black walnut
Rich brown, dramatic

Maple
Smooth and even; stains or paints

Birch
Fine grain, great value

Stain options

Shown on white oak. The same stain reads lighter on maple and birch and much darker on walnut, so we always make a sample on your chosen species.

Approximate colour, see physical sample. Wood images are illustrations, not photographs of the actual species.

CONCEPT RENDER

Sage furniture-style vanity

Painted sage Shaker on tapered legs with an open towel shelf • Champagne Bronze knobs and pulls • honed white quartz

Pulls, knobs + edge pulls

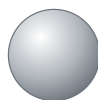

Our pulls come from Richelieu. Sizes are centre-to-centre (c-c) in mm. Longer bars (192–320 mm) look great on wide drawers and towers.

Champagne Bronze

Handleless options

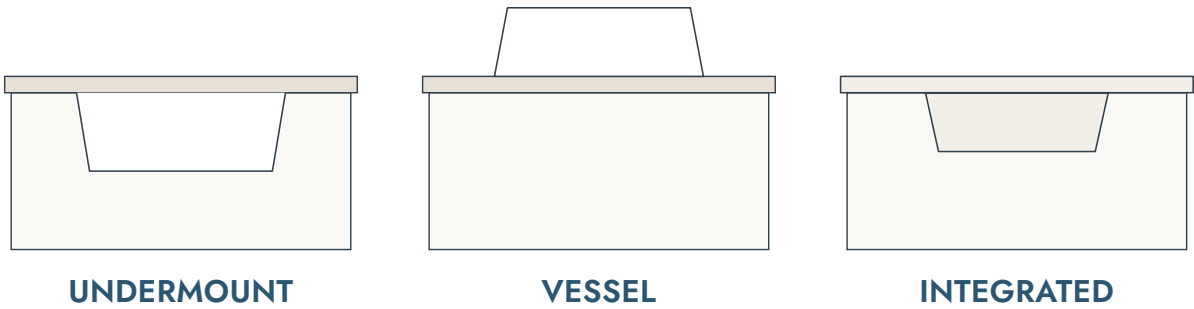

Routed J-pull or finger-pull fronts, or push-to-open with K Push latches (Richelieu 11838030).

Sizing rule of thumb

Drawers up to 24" wide: 128–160 mm. 30–36" drawers: 192 mm or two pulls. Doors: 128–160 mm vertical. Towers: 192–320 mm.

"—" means no item number in our current Richelieu records; we can source chrome and other finishes on request. Item numbers are Richelieu's.

Countertops + sinks

Undermount: bowl under the top for an easy wipe-down. Quartz or solid surface.

Vessel: bowl sits on top. We lower the vanity so the rim lands at a comfortable height.

Integrated: bowl and top in one seamless piece, in solid surface.

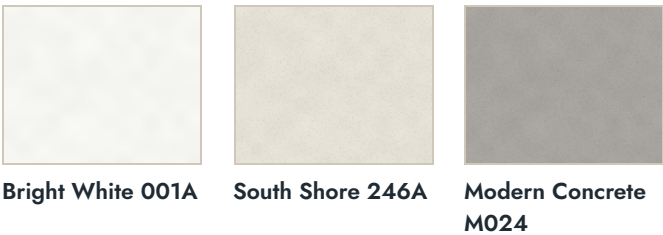

Quartz · GS Stone

Our preferred quartz supplier. 20 mm or 30 mm thick, cut and installed by the fabricator.

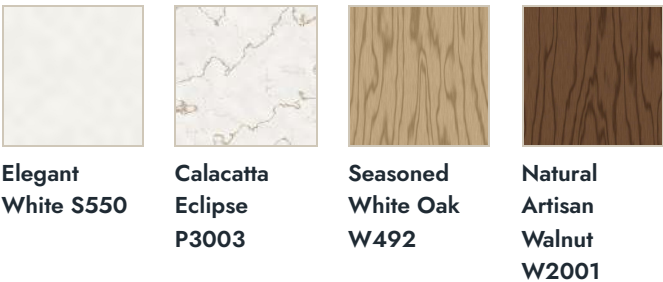

Solid surface · Meganite

Seamless, repairable, and ideal for integrated bowls and curves.

HPL laminate

Durable and affordable, made in our shop.

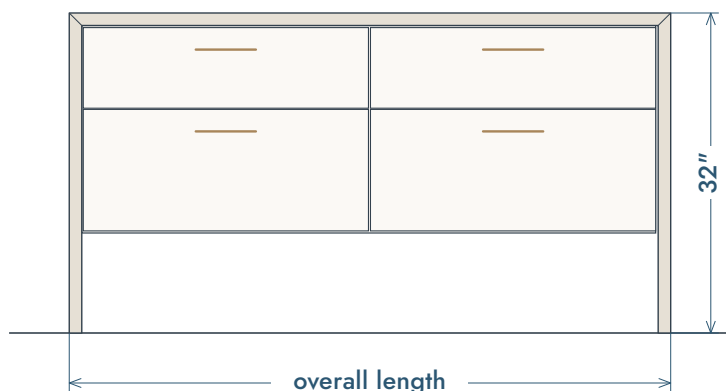

Approximate colour, see physical sample. GS Stone has many more colours on its sample racks.

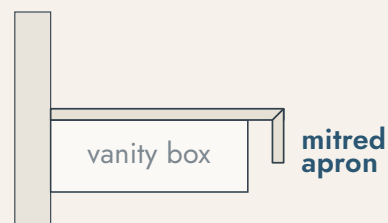

Waterfall ends + top details

A waterfall carries the countertop down the end of the vanity to the floor, so the top wraps the cabinet. It works in quartz, solid surface or laminate.

MITRED WATERFALL ENDS + 1-1/4" TOP (FABRICATOR TO TEMPLATE)

Mitred apron (section)

A mitred front apron makes a 20 or 30 mm top read as a thick slab. Redrawn from an Aurora shop detail.

Edge profiles

Standard (eased), Pencil, Quarter Bevel, Half Bevel, Demi Bullnose, Half Bullnose, Full Bullnose, Ogee. For a clean modern look we suggest eased or pencil. (Profiles done by the fabricator.)

Faucet holes

Single hole · 4" centreset · 8" widespread · none (wall-mount faucet). Tell us your faucet model so the holes and the sink centreline line up.

Backsplash + waterfall

No splash, 4" splash or full-height slab behind. Waterfall on the left, right, or both ends; a mitred front apron can make a thin top look thicker.

How it's made: the fabricator templates the top after the vanity is installed, then mitres the waterfall pieces so the grain or veining runs around the corner. The vanity box is built to sit inside the waterfall ends.

From sketch to install

1	2	3
Design meeting Bring this book, your spec sheet, photos and rough measurements. We talk through layout, finishes and budget.	Site measure We measure the room, plumbing, outlets and walls so the vanity fits exactly.	Shop drawings You get drawings with every box, door and drawer size, the finishes and hardware to approve.
4	5	6
Samples We confirm colours on physical samples: TFL, paint, stain, quartz and hardware.	Build Your vanity is cut, assembled and finished in our Fort McMurray shop.	Install We install, then the fabricator templates any stone top. Plumbing hook-up by your plumber.

Before we measure

- Choose your faucet and sink, or at least the type
- Know where the drain and supply lines are, or can move to
- Decide on outlets in drawers or towers (electrician needed)
- For floating vanities: blocking in the wall before drywall

Caring for your vanity

- Wipe up standing water, especially at edges and seams
- Use a soft cloth and mild soap; no abrasive pads
- Run the fan during and after showers
- Adjust soft-close hinges and drawers with a screwdriver if they shift over time

Sketch your space

Wall-to-wall width, window and door trim, drain and supply locations, outlets and switches.
